

Lesson Planning: S00344555

Introduction

The Stage 5 food technology syllabus incorporates both practical and theoretical elements, taking a focus on sustainable and healthy practices in a range of applications. The Australian Healthy Eating unit follows the focus area Food in Australia and looks to develop healthy eating habits in accordance with Australian food culture and society. The Year 9 food technology class at Crestwood High School is made up of 20 students with diverse learning abilities and needs, including a number of EAL/D students, and one indigenous student. The unit provides students with the ability to connect with history and society within Australia through a tangible and relatable element; food.

Reflection

The Australian Healthy Eating unit of work gradually builds on student knowledge from the Technology Mandatory Stage 4 course, providing comprehensive knowledge of food practices, production and processes in Australia. The sequence emphasises hands-on learning, allowing students to develop and display their knowledge through engaging activities. Students learn both theoretical and practical skills, with 1-2 theory lessons and 1 practical lesson each week, building up to a summative assessment. Students explore food health, the history of food in Australia and its impact on society, focusing on sustainability and individual/community health throughout.

This unit utilises a range of teaching and learning strategies, utilising hands on learning, immersive learning where students have the ability to guide their own learning, and physically learn about real world applications of the content. Following John Dewey's philosophy of education, this form of interaction allows students to create environments that boost personal and social development (Sikandar, 2015). Throughout the unit, students interact with models, prototypes and interactive educational activities which engage their minds through active participation, per Dewey's philosophy of Humanism (Sikandar, 2015). The concept of the 'more knowledgeable other' through student tuition, and scaffolding, extends student understanding and capabilities by pushing them into their Zone of Proximal Development (Hammond, 2001). This is introduced through collaborative learning, where lower students are paired with gifted students, providing these students with extra assistance, and challenging the knowledge and abilities of more gifted individuals. Student-led research further plays a significant role in this unit of work, encouraging skills such as critical thinking and problem solving, as well as providing the teacher with the opportunity to actively monitor student progress and provide guidance (Uigín, 2015). Finally, Bloom's taxonomy was utilised as a method of structuring this sequence, providing higher level learning goals and outcomes as the unit progresses.

The summative assessment in this unit is a product and portfolio that demonstrate practical skills and student competence of the design process. Similar to the unit, the assessment promotes hands-on and student-led learning, guided by scaffolding, and covering a significant amount of the NSW Syllabus outcomes. Students engaging critically with the unit's work will find it easier to complete their portfolio and design their product, as this assessment works alongside the unit sequence. Formative assessments in this unit allow teachers to check-in, monitoring student progress and determine whether changes must be made. Contributing to the summative assessment, weekly formative check-ins ensures timely progress and allows assistance and goals to be provided. Additionally, worksheets, peer reviews and self-evaluations allow for continuous development through feedback and assists the teaching in judging student understanding.

This unit incorporates a wide range of the curriculum General Capabilities and Cross curriculum priorities to enhance student learning. Literacy, numeracy and ICT capabilities form the fundamentals of this unit, guiding student learning and progression. As a design unit, critical and creative thinking are critical, particularly within the summative assessment task, where students must think both critically and creatively to develop their product successfully. The unit's focus on Aboriginal and Torres Strait Islander practices and perspectives, and Australia's social connections demonstrate the General Capabilities of Aboriginal and Torres Strait Islander histories and cultures, and Asia and Australia's engagement with Asia (NESA, 2022). Finally, throughout the unit, students will be asked to adjust for and incorporate sustainable practices into their learning.

This unit, whilst designed to be engaging, presents a large amount of information, which can be overwhelming for some students. As such, differentiation methods have been utilised to support these students. Student 1, who struggles with processing and information retention, receives highly scaffolded worksheets and assessments, providing more guidance to understand the content presented. Hands-on experiences allow both students 1 and 2 to engage with, perceive and remember better. Student 2 has been given individual and creative projects, alongside goal setting opportunities which assist in managing expectations and emotions. Extension tasks challenge gifted students in the classroom, whilst videos and images support the understanding of EAL/D students.

Overall, the Australian Healthy Eating unit is a balanced sequence that sufficiently follows curriculum outcomes, priorities and capabilities whilst providing uniform, engaging lessons that promote student learning, understanding and social skills.

Subject: Food Technology	Semester/Term: 1
Focus Area: Food In Australia	Unit Length: 5 weeks
Unit Overview: Australian Healthy Eating Students will learn about food, history, manufacture, processes and products in Australia, including foods prepared by Aboriginal and Torres Strait Islander Peoples. They will develop skills and knowledge required to create healthy food products, as well as the processes behind these food products, such as growth, harvest, manufacture and dispersal. They will culminate their knowledge with a practical assessment, re-making a fast food product to be healthier, as well as a portfolio to document their design process.	
Rationale Obesity in Australia has become concerningly more prevalent due to the increase in popularity of fast foods. In this unit, students will investigate the history of Australian food, how society has been led towards fast foods as meals, and how this can be combated through various design solutions. Students will develop a comprehensive understanding of the importance of developing healthy eating habits, and investigate the Australian food production process, gaining the ability to understand how different foods are produced, from growth to distribution. Society and technology will play a large part of student's research in this unit. The implementation of a practical project accompanied with a design portfolio provides students with a hands-on opportunity to undergo in-depth research into the processes behind food production and apply their findings to relevant scenarios.	
Learning Outcomes A student: FT5-1: demonstrates hygienic handling of food to ensure a safe and appealing product FT5-2: identifies, assesses and manages the risks of injury and WHS issues associated with the handling of food FT5-5: applies appropriate methods of food processing, preparation and storage FT5-6: describes the relationship between food consumption, the nutritional value of foods and the health of individuals and communities FT5-7: justifies food choices by analysing the factors that influence eating habits FT5-8: collects, evaluates and applies information from a variety of sources FT5-9: communicates ideas and information using a range of media and appropriate terminology FT5-11: plans, prepares, presents and evaluates food solutions for specific purposes FT5-12: examines the relationship between food, technology and society RELATED LIFE SKILLS OUTCOMES FTLS-1 FTLS-2	

FTLS-3
FTLS-4
FTLS-5
FTLS-6
FTLS-7
FTLS-11
FTLS-12

Prior learning experiences

Students have experienced a unit of food technology in both year 7 & 8, and have a decent amount of knowledge within the kitchen and in regards to food development and production. They have not had much exposure to food history in Australia.

Student learning strengths

Student 1 - Thomas

Thomas shows a heightened interest in learning in technology subjects, particularly the hands-on elements, where he is able to show his skills through methods other than writing. He thrives off targeted support, particularly 1-on-1 assistance and scaffolded instructions.

Student 2 - Emma

Emma loves to express herself and her beliefs in physical ways as it provides an outlet for her emotions, this includes through arts and other creative means. She is passionate about her indigenous heritage and enjoys finding ways to connect with her ancestry. She works very well in independent work and often gravitates towards literacy over numeracy

Student learning needs

Student 1 - Thomas

Thomas has been placed on the Life Skills curriculum. As such, his tasks will need to be adjusted to an attainable level through a higher level of guidance and scaffolding. He struggles in maintaining focus in theory oriented classes as such a more practical approach should be taken to assist his learning.

Student 2 - Emma

Emma is diagnosed with ADHD, which often makes it difficult for her to focus on tasks, particularly when she is in a group of people. It takes her longer to complete tasks, as she is easily distracted. She struggles with managing her emotions, which can sometimes cause outbursts in the classroom. Emma requires a goal-setting approach to learning, where she is able to set achievable and tangible goals to keep her focused. She will need to be provided with opportunities to express creativity and connect with her culture.

Assessment

Summative:

Students will develop a healthy food product and make it in class in week 5
Students will produce a portfolio documenting the design and development of their healthy food product

Formative:

Weekly portfolio check-ins

Resources

- Portfolio scaffolds for assignment
- Weekly Recipes
- Exemplar Portfolio example
- Cooking equipment
- Aprons
- Dish Cloths
- Cooking Ingredients

Weekly cooking tasks
Brainstorms

Diverse and Inclusive Teaching and Learning Requirements

Considerations within this classroom include accounting for EAL/D, Aboriginal and Torres Strait Islander and Life Skills requirements:

- Adjustments for pace and difficulty of activities to assist students with learning difficulties
- Implementation of traditional Aboriginal and Torres Strait Islander methods of food production and cooking
- Implementation of a variety of learning methods and resources including visual elements, auditory elements, hands-on features and ICT engagement
- Adjustment of learning content for life skills student including more in-depth scaffolding and targeted assistance
- Encourage tasks that require higher order thinking for gifted students in the class

Work Health and Safety Considerations

- Ensure students with long hair have their hair secured in a ponytail, bun or using a hair net
- Ensure all students are wearing fully enclosed leather shoes

Weekly Focus

Week	Learning Outcomes	Topic Focus
1	FT5-6/ FTLS-3 FT5-7/ FTLS-4	Healthy Eating: Recap Students must complete OnGuard WHS modules in their first lesson to ensure safe work in the food technology rooms. - The 5 Food Groups - Dietary Guidelines <i>Students will receive their assignment task notification for the assignment due at the end of the unit of work.</i>
2	FT5-1/ FTLS-1 FT5-2	Safe food preparation - Safe work practices in the kitchen - Hygienic practices in the kitchen - Continued development of portfolio for assessment task - Practical lesson (heightened focus on safe food preparation)
3	FT5-1 FT5-2 FT5-6/ FTLS-3 FT5-11 FT5-12/ FTLS-12	The History of Australian Foods - Aboriginal and Torres Strait Islander food preparation processes - Aboriginal and Torres Strait Islander health - Timeline of food preparation, production and types of foods in Australia - Practical lesson looking at a range of bush tucker
4	FT5-6/ FTLS-3 FT5-8/ FTLS-5	Food and Society - Technology and its impact on food in Australia - Society and its impact on food in Australia - Continued development of portfolio for assessment task - Practical lesson acting as a practice for Assessment Task in week 5 (allowing for feedback and check-in)

	FT5-9/ FTLS-6 FT5-12/ FTLS-12	
5	FT5-6/ FTLS-3 FT5-8/ FTLS-5 FT5-9/ FTLS-6	Food and Fibre Production - Food production and manufacture - Sustainable production methods - Continued development of portfolio for assessment task - Practical lesson creating designed healthy food product for submission <i>Summative assessment (Practical element) due in class this week</i>

Content Organisation

1	Healthy Eating: Recap			
	Students learn about: The Five Food Groups The Dietary Guidelines	Students learn to: Demonstrate understanding of nutritional aspects of food Identify guidelines for balanced, nutritional diets Understand and apply knowledge of nutrition to real-world applications in Australia	Integrated Teaching and Learning Activities Remember Students will recall knowledge from Stage 4 regarding the five food groups and dietary guidelines according to Eat For Health. The teacher will lead a class discussion, forming a recall brainstorm. They will also complete a mix and match activity, matching the guidelines to their descriptions and importance. Apply Students, in groups of 4 selected by the teacher, collaboratively create a poster for one food group, which will be shared with the class They should look to answer the following questions in an engaging manner: - What are the main foods in this food group? - What are the nutritional benefits of this food group? - Why is this food group important?	Assessment <i>Students receive Summative Assessment Task Notification</i> Group posters to demonstrating understanding of the 5 food groups Complete a class brainstorm to establish prior knowledge Observe student participation. Look for students who may be: - Struggling with the task - Not contributing to group discussions
	Workshop/Practical: OnGuard Lesson			
	Students learn about: Safety requirements within the food technology kitchens	Students learn to: Demonstrate appropriate selection of equipment and techniques used in food preparation Demonstrate safe and hygienic work practices	Integrated Teaching and Learning Activities Remember Students will cover refresher modules on kitchen safety using OnGuard, recalling information that they have learnt in previous years. Understand	Assessment Observe Student Participation. Is the student: - Actively and correctly completing the task - Demonstrating a sufficient understanding of safe work practices

			Students will read and understand new information regarding the safety of new equipment that they will encounter during this course.	Hurdle task to cook in the kitchen.
	Differentiation	Student 1 Thomas will be given a differentiated assessment task that has been adjusted to the Life Skills curriculum, this version will be highly scaffolded and less complex, allowing him to understand the task with more clarity. The hands-on mix and match activity suits Thomas's needs without singling him out from the rest of the class, allowing him to participate effectively in the lesson. Student 2 Emma will be asked to complete a poster on Aboriginal and Torres Strait Islander food beliefs and traditions whilst the class completed the food group posters, allowing her to express her culture and work independently. Whole Class Large amounts of visual elements and examples, particularly in relation to the 5 food groups, assist with understanding for EAL/D students in the classroom.		

2	Safe food preparation			
	Students learn about: Safe production and preparations of food	Students learn to: Demonstrate safe and hygienic work practices	Integrated Teaching and Learning Activities Remember Students will be required to recall their knowledge regarding safe and hygienic processes in the kitchen, completing a worksheet identifying safety hazards in the kitchen (Appendix A). They will then swap with another student (selected by teacher), who will mark their work and	Assessment Observe student engagement. Are the students: - Focused on their task - Working independently

3	Hygienic processes in food preparation		present feedback, working with one another to fulfil each other's understanding of the topic. Understand Students will learn about safe production methods in the kitchen, including: - Safe use of knives - Correct PPE - Safe use of Ovens and other Hot Appliances The teacher will conduct an "I do, we do, you do" example of each safe method. At the end of the lesson, students will be asked individually to discuss the progress of their portfolio with the teacher, allowing an identification of weaknesses or struggling students.	- Confident in their answers Peer marking and feedback Teacher Check-in on student Portfolio progress.
	Workshop/Practical: Kangaroo "Chicken" Nuggets			
	Students learn about: Practical implementations of safety process in food preparation Fast Food	Students learn to: Modify a recipe(s) to include bush tucker ingredients Demonstrate safe and hygienic work practices	Integrated Teaching and Learning Activities Understand Teacher will provide a demonstration of practical activity for the lesson, maintaining a focus on the safety procedures, as well as the elements of the recipe that has been modified. Apply	Assessment Self-Evaluation of cooking process Observe student engagement. Do they: - Demonstrate safe cooking methods - Create a quality final product
	Remake Famous Australian Foods		Students will apply their learnings from previous lessons and the demonstration, to cook healthier nuggets.	- Demonstrate an understanding of
	Students learn about: Aboriginal and Torres Strait	Students learn to: Investigate the use and nutritional values of bush tucker ingredients	Integrated Teaching and Learning Activities Evaluate Remember Students will evaluate their final product, noting positives, negatives and anything that they observed during the process. Students will demonstrate their prior knowledge of the content through a worksheet.	Assessment Weekly Check in on Portfolio Progress Creation of timeline to demonstrate understanding

	Islander food preparation Australian Food over time	Discuss the impact of migration on food habits Investigate Aboriginal and/or Torres Strait Islander cultural knowledge of food and food practices, and the protection of that knowledge Investigate the development of food production and processing technologies	Understand Students will learn about the importance of food production, practices and processing through a PowerPoint presentation and videos. They will learn about impacts on food in Australia, particularly Aboriginal and Torres Strait Islander knowledge and practices. Students will research and complete a worksheet following the life of an Aboriginal person throughout history (Appendix B). Apply The class will work together to create a timeline of food production, practices and processing to visually represent their learning.	Establishing prior knowledge using a worksheet
Workshop/Practical: Bush Tucker				
	Students learn about: Aboriginal and Torres Strait Islander food preparation Traditional types of food and methods of food production	Students learn to: Modify a recipe(s) to include bush tucker ingredients Demonstrate safe and hygienic work practices	Integrated Teaching and Learning Activities Understand Teacher will present a range of bush tucker ingredients, allowing students to taste-test some ingredients. The teacher will discuss ways that these ingredients may be incorporated into modern recipes, taking suggestions from the class. Create & Evaluate Students will complete a short, individual activity, modifying a recipe to include one or more bush tucker ingredients. They will then evaluate their recipe based on: - How easy the recipe would be to make - Will the ingredient will add or subtract from the recipe and its nutritional value	Assessment Worksheet demonstrating student's memory of lesson Assess student engagement, do students: - Actively participate in lesson - Demonstrate an understanding of preparation and nutritional aspects of the food - Demonstrate safe WHS practices

			- Any other opinions or comments the student wishes to make	
	Differentiation	Student 1 Completing a physical timeline provides Thomas with a hands-on method of learning, allowing him to completely understand and visualise the progress of food types and production over time. Taste testing different types of bush tucker is a tactile form of learning, which will benefit Thomas' understanding. Thomas will be provided with a recipe to modify, and some suggestions for him to place into his recipe. His evaluation will follow guided questions. Student 2 Drawing/writing bush tucker food/plants allows Emma an opportunity to connect with her knowledge about her culture, as well as express her creativity through drawing. Emma will be granted the ability to offer traditional snacks or meals from her own culture that she would like to share during the practical lesson. Emma will be encouraged to create her own recipe to express her creativity. Whole Class The use of a visual, tangible timeline will assist in understanding for both visual and kinaesthetic learning styles, as well as support the understanding of EAL/D students. The class will have the option to modify or create recipes, allowing gifted students an opportunity for more of a challenge.		

4	Food and Society			
	Students learn about: The impacts of technology and society on food in Australia	Students learn to: Discuss the impact of migration on food habits Investigate the development of food production and	Integrated Teaching and Learning Activities Understand Teacher will present a PowerPoint presentation on the impacts of technology and society on food, using a large amount of visuals and videos. Analyse	Assessment Research task to assess and demonstrate student knowledge Weekly check-in on Portfolio progress

	How food impacts, influences and changes society	processing technologies Assess the nutritional implications for Aboriginal and/or Torres Strait Islander Peoples of introduced foods Examine influences on food selection	Students will complete a research tasks in groups that looks to connect particular changes/events in society with changes in food production and practices Evaluate A class debate will allow students to argue their opinions to defend or oppose the introduction of new food production methods and practices. Create The class will be tasked with designing or redesigning a food production or processing technology that may be introduced in the future.	Design task to assess student understanding of practical applications of content. Assess student engagement, do students: - Actively participate in class discussions - Correct discuss nutrition of individuals - Correctly demonstrate the design process.
	Workshop/Practical: Assessment Task Trial Run			
	Students learn about: Practical implementation of food production and preparation Methods of improvement for	Students learn to: Demonstrate appropriate selection of equipment and techniques used in food preparation Demonstrate safe and hygienic work practices	Integrated Teaching and Learning Activities Apply Students will cook their meal that they have designed, applying safe work practises that they have learnt during the unit Their task will demonstrate their understanding of the incorporation of Aboriginal and Torres Strait Islander foods and/or practices. Evaluate	Assessment Check-In for practical element of assessment task, allowing for feedback and improvement. Observe Students, do they: - Actively refer to their recipe, and

	their assessment tasks	Design, plan and prepare safe food items which reflect the changing nature of Australian cuisine	Through their portfolio, students will conduct an evaluation of their design project using their own observations and teacher feedback to make judgements and evaluate their progress. Create Students will be cooking a meal that they have created throughout the unit, applying the design process, content knowledge, practical skills and research. At the conclusion of this task, the students should develop achievable improvement goals for the task in week 5	follow it concisely - Demonstrate an understanding for cooking process - Undertake appropriate WHS procedures in the classroom
	Differentiation	Student 1 Thomas will be placed in a group of gifted students who will act as “more knowledgeable others”, assisting him in his learning and understanding. Thomas’ activity, to design a future food manufacture technology, will be highly guided and scaffolded to assist his design ideas, and allow him to understand the task further. Thomas will be following the recipe he has created with the assistance of a larger amount of scaffolding, following criteria suited to the life skills curriculum. His recipe will contain images for him to refer to, and he will be provided with extra time to complete his task if he requires it. Student 2 The inclusion of Aboriginal and Torres Strait Islander history and nutrition allows Emma to connect deeper with her culture, engaging her more in the content being taught. An element of this lesson will be to design a technology that might be able to benefit Australia’s food production in the future, allowing Emma to express her creativity through design and independent work. Emma will be provided with extra time to complete her cooking task, if she requires it, as a consideration for her difficulty with starting particular tasks. Whole Class A large range of visual elements allows EAL/D students to engage deeper with the content, and provide opportunity for better understanding. A combination of visual, oral and hands-on learning allows for all types of learners to be accommodated for in the classroom		

	An option to design a new product OR redesign an existing product provides high achieving students with the ability to undertake a more challenging activity
--	--

5	Food and Fibre Production			
	Students learn about: The production of various types of food and fibre in Australian Sustainable food production methods	Students learn to: Investigate the development of food production and processing technologies	Integrated Teaching and Learning Activities Understand Teacher will present a short presentation, using videos and images to demonstrate the various types of food and fibre production in Australia Apply Students will engage with small, functional prototypes of production technologies, investigating operations of these technologies first-hand. Analyse Students will complete a worksheet during their interaction with models, questions include: - Experiment with the technology; what do you notice? - What use might this technology have in the food industry?	Assessment Final portfolio check-in with students Completed worksheet collected to determine student learning from lesson
	Workshop/Practical: Assessment Task Production - Healthy Fast Food			
	Students learn about: Practical implementation of food	Students learn to: Demonstrate appropriate selection of equipment and techniques used in food preparation	Integrated Teaching and Learning Activities Apply Students will cook their meal that they have designed, applying safe work practises that they have learnt during the unit Their task will demonstrate their understanding of the incorporation of Aboriginal and Torres Strait Islander foods and/or practices.	Assessment Practical Summative Assessment (Cooking a healthy fast food product), assessed by teacher.

	production and preparation	Demonstrate safe and hygienic work practices Design, plan and prepare safe food items which reflect the changing nature of Australian cuisine	Evaluate Through their portfolio, students will conduct an evaluation of their design project and final product. They will begin this by the end of the lesson in preparation for submission in week 6. Create Students will be cooking a meal that they have created throughout the unit, applying the design process, content knowledge, practical skills and research.	Observe Students, do they: - Actively refer to their recipe, and follow it concisely - Demonstrate an understanding for cooking process - Undertake appropriate WHS procedures in the classroom
	Differentiation	Student 1 Thomas will be given a worksheet with modified questions, following the life skills curriculum. The use of models allows for a hands-on experience, allowing Thomas to investigate the workings of relevant technologies to develop his own understandings. Thomas will be following the recipe he has created with the assistance of a larger amount of scaffolding, following criteria suited to the life skills curriculum. His recipe will contain images for him to refer to, and he will be provided with extra time to complete his task. Student 2 Emma will have a goal set to work through at least 4 questions through interaction with the technology models before she will have the opportunity to return to working on her Technology design from the previous week, allowing her to set her own pace of work, and providing a tangible goal and reward. Emma will be provided with extra time to complete her cooking task as a consideration for her difficulty with starting particular tasks. Whole Class Fast finishers have the ability to return to designing their future technology from the previous week. Worksheets and model interactions contain physical, visual and written components to cater to various learners in the classroom.		

Lesson Plan 1

Class/Grade/Stage: Year 9 (Stage 5)		Date: 19/02/2024	Start: 09:50 am Finish: 10:50 am
Key Learning Area(s): Food Technology		Lesson Topic: History of Australian Food	
NESA Australian Professional Standards for Teachers		1.2, 1.4, 1.5, 2.1, 2.2, 2.3, 2.4, 3.3, 3.4, 4.1, 5.1, 5.2	
Recent Prior Experience: Students have encountered a small amount of Aboriginal and Torres Strait Islander food perspectives and beliefs at the beginning of the course.			
Syllabus/Syllabi Outcome(s): <i>FT5-6: describes the relationship between food consumption, the nutritional value of foods and the health of individuals and communities</i> <i>FT5-12: examines the relationship between food, technology and society</i>		Indicators of Learning for this lesson- learning intentions and success criteria: Learning intention: - The progress of health and nutrition in Australia over time - How food, technology and society are dependent on, and shaped by one another - How to apply Aboriginal and Torres Strait Islander practices into modern contexts and the resulting nutritional benefits Success criteria: - Ss will be able to craft a timeline of food processes and production in Australia - Ss will be able to explain the significance of the relationship between food, technology and society - Ss will be able to identify reasons why food consumption and nutrition impacts health, and its impacts in history	Assessment: Formative: - Weekly Check in on Portfolio Progress - Creation of timeline to demonstrate understanding - Establishing prior knowledge using a worksheet

Any safety issues to be considered (APST 4.4.1): - Ethical ICT use	Resources: - Physical Timeline and event cards - Prior Knowledge Worksheet - PowerPoint Presentation - Content Videos - Computers - Projector - Stationary
---	---

Lesson Content / Indicators of Learning/ Teaching Strategies (<i>What is Taught</i>):	Timing (mins)	Learning Experiences: (<i>How it is taught</i>)	Resources and Organisation:
INTRODUCTION			
Establish Prior Knowledge - What do students know about food over time?	10 mins	T will assess Ss prior knowledge on content through a worksheet. Ss will spend 10 minutes filling out this worksheet, including drawing types of food and technologies, as well as brainstorming examples of food relationships. <i>Differentiation</i> - The incorporation of drawing allows Student 2 to manage her emotions through the inclusion of creativity	- Prior knowledge worksheet - Stationary
DEVELOPMENT			
Health and Nutrition in Australia	40 mins	T will show a PowerPoint presentation on food production, practices and processing. Two videos will be used to supplement student understanding. To maintain engagement, at the end of each major learning point, Ss will participate in a think-pair-share class discussion. Ss to work collaboratively to create a timeline of events showing the progression of food in Australia over time. They will match images and facts to points in time.	- PowerPoint presentation - Video 1: https://www.youtube.com/watch?v=OJK7d1o8sk0&ab_channel=ClickView - Video 2: https://www.youtube.com/watch?v=bKKGuHoBt4o&ab_channel=BrevilleAustralia

		- T to watch and guide students where necessary → Encourage self-guided research if students are unsure. <i>Differentiation</i> - A physical timeline assists Student 1 in visualising the concept he is learning - Videos and images supplement understanding for EAL/D students	- Physical timeline and event cards - Projector - Computers
CLOSURE			
Check-ins and Reminders	10 mins	Ss to spend time working on their Portfolio for their assessment task - T to check-in with each student individually to ensure adequate progress → If progress is deemed inadequate, a follow-up should occur T to remind students to bring Aprons, Containers, Tea Towels and Leather shoes for their practical lesson.	- Computers - Portfolio scaffolds

Lesson Plan 2

Class/Grade/Stage: Year 9 (Stage 5)		Date: 22/02/2024	Start: 11:20am Finish: 12:20pm
Key Learning Area(s): Food Technology		Lesson Topic: Bush Tucker	
NESA Australian Professional Standards for Teachers		1.2, 1.4, 1.5, 2.1, 2.2, 2.3, 2.4, 3.3, 3.4, 4.1, 4.2, 4.4, 5.1	
Recent Prior Experience: Students have learnt about Aboriginal and Torres Strait Islander foods and traditional food practices. They have also learnt about appropriate conduct in the kitchen and WHS procedures.			
Syllabus/Syllabi Outcome(s): <i>FT5-1: demonstrates hygienic handling of food to ensure a safe and appealing product</i> <i>FT5-2: identifies, assesses and manages the risks of injury and WHS issues associated with the handling of food</i> <i>FT5-11: plans, prepares, presents and evaluates food solutions for specific purposes</i> <i>FT5-12: examines the relationship between food, technology and society</i>		Indicators of Learning for this lesson- learning intentions and success criteria: Learning intention(s): - Identify different types of bush tucker, their uses and their nutritional value - Explain the processes and ingredients within several types of bush tucker - Increase confidence in WHS kitchen procedures Success criteria: - Demonstrate a competent understanding of WHS procedures, and appropriate ways to implement them - Develop and evaluate a successfully modified recipe that correctly uses at least one bush tucker ingredient - Provide an example of how food impacts society, and how society impacts food.	
		Assessment: <i>Formative</i> - Modified/Designed Recipe demonstrating an effective solution to the scenario presented - Evaluation of designed recipe - T observation of student demonstration of safe and hygienic practices	
Any safety issues to be considered (APST 4.4.1): - Handling of food (Hygienic practices)		Resources: - Bush Tucker ingredients	

- Use of fire (Safe distance and careful use)	- Bush tucker recipes - Matches & Firepit - Recipe and Evaluation worksheet - Computers
---	--

Lesson Content / Indicators of Learning/ Teaching Strategies:	Timing (mins)	Learning Experiences:	Resources and Organisation:
INTRODUCTION			
Safety preface	5 mins	T to explain the intentions and expectations for the lesson. - Ss will be interacting in an area around a fire pit, they must exhibit safe WHS practices at all times, otherwise the activity will not proceed - Ss are to put on clean aprons, tie their hair back and wash their hands before leaving the classroom <i>Class will move to agricultural plot for lesson.</i>	Prior: Set up Bush Tucker station in Agricultural plot.
DEVELOPMENT			
Bush Tucker Stations - Bush Tucker ingredients - Damper Making - Planting	45 mins	T will conduct a 5 minute presentation discussing the various foods that Ss will interact with in this lesson, maintaining the strict expectations for the lesson. The students will then have 35 minutes of student-led investigation, visiting the three different stations: - Ss will taste and evaluate various bush tucker ingredients. They will have meaningful conversations with their group about the ingredients, writing down their observations - Ss work with T to make and taste damper, discussing the production process, as well as the final product	- Bush Tucker Ingredients - Fire Pit - Table - Plants - Clipboard, paper and pens

		- Ss will work collaboratively with their group to learn about, and select a bush tucker plant to plant in the agricultural plot. The class will regather for the final 5 minutes for a full class discussion, presenting questions and observations from the lesson. <i>Differentiation</i> - Physical interactions will assist Student 1's learning, as he is able to visualise the concept better - Aboriginal and Torres Strait Islander perspectives provide Student 2 with an opportunity to connect with her culture. Elements of the 8 ways of learning are incorporated to assist her learning. - Both Student 1 and 2 will be given a goals worksheet to assist their focus and guide their learning.	
CLOSURE			
Modified Recipe	10 mins	Ss will summarise their knowledge by modifying (or designing) a recipe that incorporates bush tucker. T will encourage students to use the ingredient from the plant that they planted. - Fast finishers will be given a worksheet to evaluate their recipe, and answer questions about food and society - T to inform Ss that those who do not finish will have an opportunity next week to finish their recipe. <i>Differentiation</i> - Student 1 will be provided with a highly scaffolded recipe and evaluation sheet - Student 2 will be encouraged to create her own recipe to express her creativity	- Recipe modification worksheet - Evaluation worksheet

Lesson Plan 3

Class/Grade/Stage: Year 9 (Stage 5)	Date: 27/02/2024	Start: 1:50pm Finish: 2:50pm
Key Learning Area(s): Food Technology	Lesson Topic: Food and Society	
NESA Australian Professional Standards for Teachers	1.2, 1.4, 1.5, 2.1, 2.2, 2.3, 3.3, 3.4, 4.1, 5.1, 5.2	
Recent Prior Experience: Students have learnt about Aboriginal and Torres Strait Islander communities and their perspectives on food. They have applied this knowledge to the impact on current society. Students have also investigated the history of Food in Australia, and the changes that occurred.		
Syllabus/Syllabi Outcome(s): <i>FT5-6: describes the relationship between food consumption, the nutritional value of foods and the health of individuals and communities</i> <i>FT5-8: collects, evaluates and applies information from a variety of sources</i> <i>FT5-9: communicates ideas and information using a range of media and appropriate terminology</i> <i>FT5-12: examines the relationship between food, technology and society</i> <i>FT5-13: evaluates the impact of activities related to food on the individual, society and the environment</i>	Indicators of Learning for this lesson- learning intentions and success criteria: Learning intention(s): - Develop knowledge of the importance of food to society and culture - Understand how events are able to change societal outlook on food - Judge whether certain events had positive or negatives impacts on communities Success criteria: - Successfully explain the impacts the specific events have had on society - Show how food and society depend on each other - Make and argue a judgement on the effect of a specific event on food and society	Assessment: Formative: - T to observe student understanding and skills through class debate - Research Task demonstrates understanding of social impacts on food

Any safety issues to be considered (APST 4.4.1): - Ethical use of ICT	Resources: - PowerPoint Presentation - Videos - Research Task Scaffold - Computers - Projector
--	---

Lesson Content / Indicators of Learning/ Teaching Strategies (<i>What is Taught</i>):	Timing (mins)	Learning Experiences: (<i>How it is taught</i>)	Resources and Organisation:
INTRODUCTION			
Class entrance and set-up	5 mins	T to direct students to take their seats. T will explain the intentions and activities for the lesson: - To develop knowledge of the importance of food to society and culture - To understand how events are able to change societal outlook on food - Research leading into a debate	
DEVELOPMENT			
T to introduce the relationship between food and society. Ss will move into student-led research regarding a particular event.	45 mins	T to present a PowerPoint presentation on the relationship between food and society, providing some example events that have changed food culture in Australia. Supplementary videos will be used T to select groups of 4 for Ss to work collaboratively on a research task . Ss will be given questions that they should answer, and will be allowed to select their preferred presentation method (e.g. PowerPoint, Poster, etc) Ss then regather as a class to debate, defending their researched event as the most important event to Australia's food history. Groups may use their research presentation to supplement their argument.	- Powerpoint Presentation - Videos - Research Task Worksheet - Computers - Projector

		<i>Differentiation</i> - Student 1 will be placed in a group with “more knowledgeable others” to assist his learning and understanding. He will also be given a more scaffolded question sheet - Student 2 will use goal-setting to make her learning seem more achievable and rewarding	
CLOSURE			
Summary and Reminders	10 mins	T to summarise student learning, affirming their research and explaining the reasons behind the importance of each event. T will request that one student from each group shares their research task with them. T to remind students to be prepared for their practical lesson, including all the ingredients and PPE that they require.	- Computers

FOOD SAFETY & HYGIENE PRACTICES

Using the word bank complete the following section

Not know	microwave	Behave	immediately	temperature
Guess	refrigerator	downwards	60	Danger zone
Internal	potentially	Everyone's	method	cleanliness
Questions	workspace	Apron	Cooked	
Cooking	crucial	As you go	hands	doors
Think	safety	Raw	separate	75
Cross-contamination				

Safety in the kitchen is e_____ Responsibility. You are responsible for the c_____ of your h_____, a_____ & w_____ and your work practices. You are also expected to b_____ in a manner that will not harm others.

Personal Hygiene

Personal hygiene involves standards of cleanliness and personal presentation that all food handlers should follow. Would you eat a meal if the chef had not washed her hands after visiting the bathroom? What about if she blew her nose, then picked up a stray chip to put on your plate before it was served to you? The trouble is that you would _____ any of these things had happened, & the germs that may be passed on to your meal could make you very sick.

Food Hygiene

Foods will be safe from contamination if correct personal hygiene is maintained, but this not enough to keep food safe. C_____ of food occurs when r_____ foods come into direct or indirect contact with c_____ foods. S_____ equipment should be used for raw & cooked food; & they should also be stored separately (properly covered). Washing up should be thorough, using very hot water & detergent.

Most food-poisoning bacteria will be killed by c_____ – provided the cooking t_____ is high enough. The cooking temperature depends on the type of food and the cooking m_____.

The _____ factor is the i_____ or inside temperature of the food. For example, rare roast beef should reach an internal temperature of _____°C, while chicken and hamburger patties should have a minimum internal temperature of _____°C.

The growth of food causing bacteria is greatest in the temperature d_____ z_____. – **between 5°C and 60°C**. All raw and cooked food must be stored outside the danger zone (consider refrigerator or bain marie). Frozen food should be thawed in the r_____ or the m_____. Leftovers should be reheated quickly to a temperature of 75°C to ensure bacteria do not have time to grow when they are passing through the danger zone.

Questions

1. Explain what is meant by the term 'personal hygiene'.
2. Give examples of personal hygiene that must be followed when preparing and cooking food.
3. What is cross contamination?
4. Why is it important to understand cross contamination?
5. Identify the danger zone for the growth of microorganisms.
6. Why is it necessary to store foods out of the danger zone?

7. How should you thaw frozen foods?

Other rules to remember in the Food Technology room

- Beware of utensils with sharp edges. Walk with knives pointing d_____, do not place knives into a sink of soapy water as they can be hidden from view and may injure the person washing up.
- Work efficiently. Clean a _____ y_____ g_____, close cupboard d_____ and drawers as you use, then mop up spills i_____ and n_____ running.
- Think s_____. Watch out for pot handles hanging over the edge of cook tops, knives on the edge of benches and other p_____ dangerous situations.
- Be careful when working with steam, gas, hot oil and electricity.
- Finally, follow all instructions. If in doubt, ask q_____ rather than g_____.

LIFE ON THE MISSION

A Day in the life of an Aboriginal person on a mission, reserve or station

Aboriginal life changed dramatically after European settlement. (AIATSIS, 2019) state that from the time the First Fleet landed on Sydney Cove in 1788, Aboriginals were subject to rules and regulations aimed at controlling every aspect of their lives.

Over time, the creation of reserves or similar parcels of land were driven by different philosophies and initiated by different groups – churches, government, non-Aboriginal residents of towns or Aboriginal people themselves.

Though many Aboriginal people had little choice but to live on the reserves or in missions, they often developed very deep attachments to them and to the areas adjacent to the reserves.

Many other Aboriginal people did not live on Aboriginal missions, reserves or stations, but in towns, or in fringe camps on private property or on the outskirts of towns, on beaches and riverbanks mostly in extreme poor living conditions (AIATSIS, 2019).

This table outlines the rations recommended per person on Aboriginal missions in 1952.

Table 4. Basic ration scale per head -- recommendations, 1952

Item	Per day	Per week
Meat (boneless wgt)	1 lb	7 lb
Potatoes	4.5 oz	2 lb
Vegetables or fruit, fresh or tinned	4.5 oz	2 lb
Dried peas	1 oz	.5 lb
Bread or flour	12 oz	5 lb
Baking powder	.5 oz	3 oz
Porridge meal	2 oz	1 lb
Sugar	3 oz	1.25 lb
Jam, Syrup or treacle	3 oz	.75 lb
Dried milk, or cheese	.5 oz	4 oz
Liver or green vegetables	1 oz	7 oz
Dripping margarine or butter	4 oz	1.75 lb
Salt	1 oz	.5 lb
Tea	3 oz	1 oz
Water-pure potable water from an approved source and entirely available for drinking	6 pints	5 qts (sic) (≈5 gal.)

Note: 1 lb = 0.45 kg; 1 oz = 28 g; 1 pint = 0.57 litres
Reproduced from Department of Native Affairs, Western Australia 1952b: 4.

Remembering the Mission Days. (2019). Retrieved from <https://aiatsis.gov.au/exhibitions/remembering-mission-days>

- Based on these rations in the table do you think the Aboriginal people living on missions, reserves or stations were meeting their nutritional needs? Why or why not?

- Assess whether you think based on nutritional value Aboriginal people were eating better before or after European settlement? Justify your answer.

The following table shows three common health issues for Indigenous Australians. Research these health issues and identify foods and strategies that are known to help prevent each health issue.

Three common Indigenous health issues	Identify 2 foods and 1 strategy to help prevent this from occurring.
	CARDIOVASCULAR DISEASE
